 $^{1)} Rated output of a typ. 6-pole standard induction motor based on IL or IH with 400 V 3 AC 50 Hz (kw) or 460 V 3 AC 60 Hz (hp).$

 $^{2)}\mbox{The base load current IL is based on a duty cycle of 110% for 60 s or 150% for 10 s with a duty cycle period of 300 s.$

³⁾The base load current IH is based on a duty cycle of 150% for 60 s or 160% for 10 s with a duty cycle duration of 300 s. 4) The specified power loss represents the maximum value at 100% utilization. The value is lower under normal operating conditions.

⁶Current required for reliably triggering protective devices.
⁶Longer cable lengths for specific configurations are available on request. For additional information, please refer to the SINAMICS Low Voltage Engineering Manual.
